

Managing Business and IT

We will support you ...

The initiator of our company is involved for nearly four decades in IT and has worked as a qualified German Systems Analyst in various industries (manufacturing, military, wholesale- and retail, banking / leasing / credit cards, service providers, hospitality, tourism and public service organizations).

He also has international experience in these fields and worked in Germany, Switzerland, New Zealand and Mauritius for many years. For the last eight years he has been writing as a freelance ICT Journalist and is the main author for a German computer magazine covering a broad spectrum of IT and business related issues.

His total commitment to our clients in Mauritius and overseas is shared by his partners and the whole team.

Please download detailed descriptions from our website in the Services area at: www.joemeier.net or e-mail your questions to: info@joemeier.net

The commitment to our clients ...

They can always expect honest and reliable services from us. It is our aim to work together with them in a long lasting relationship based on mutual trust to achieve the best results for their business / organisation working to their fullest satisfaction.

ICT (Information & Communication Technology) - esp. the Internet - has become the backbone of most businesses worldwide. The developments in Hardware and Software Technology over the last two decades were breathtaking and we all are challenged to keep up with them.

Management and users are confronted with an ever increasing learning curve to master these new developments - time and financial constraints are also often of concern. It is not so important to have always the latest technology – be it hardware or software – available. Making the best use of existing equipment combined with a well trained and up-to-date workforce is often the most critical factor for the success of your business.

The demand for specialized external support is steadily increasing because the capacities are often not available in-house. We have the knowledge and experience to support your company and its workforce integrating IT better into the workflow of your business with measurable results.

Joe Meier – ICT & Business Consulting

Taking care of your IT & Business needs on the island ...

Planning, implementation

We are addressing your business needs ...

We are taking a proven and internationally accepted approach to give you the best advice possible.

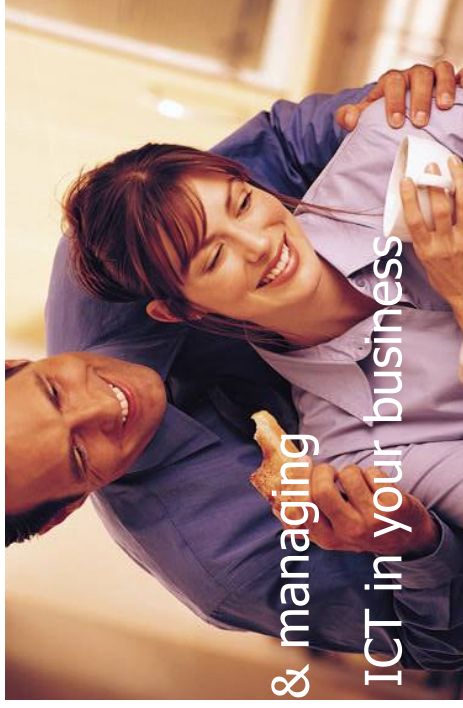

At the first stage we are asking you to fill out our comprehensive questionnaire – this way we learn more about your business. It can be downloaded from our website and then be sent back by e-mail.

In addition we provide you with forms on our web site for specific problems you might have or to give us a description what expectations you have for the work to be done by us.

Based on this we will talk over the phone and/or in person to clarify the necessary details before we start to work for you. The fees for our services are extremely competitive because we are utilizing the latest technologies (for example: VNC – Virtual Network Computing – to solve many problems online; in such cases we take over your computer from a remote location to get the job done) – this helps us to keep our overheads low. You too will benefit from this.

We achieve measurable results ...

Because of the proven methods applied we will - based on the initial analysis of your business situation, structures and the existing workflow - define an improved outcome for your company/organisation. This allows you to take and keep control over the progress made and the results achieved.

We are taking responsibility ...

Because it is our aim to build up a long lasting business relationship with you we are taking care even after the work for you has been done. You can come back to us anytime when a problem arises or if you have questions.

We also don't bother you with often unnecessary maintenance contracts (this approach is based on the experience by our principal who has spent a large amount of time over the last years to rectify the burdens forced upon customers by suppliers).

These supporting after-sales services are free of charge for our clients who have become members of our network.

Our **Membership Card** will offer you also many other advantages. Some of them are listed here:

- Our regular newsletter putting together the latest developments in ICT world wide based on our international experience and how we all can benefit of them in Mauritius
- The latest tools and utilities to keep your computer equipment up-to-date – free and exclusive downloads from our web site only for our members with relevant descriptions / manuals
- The best practice relevant articles the initiator has written for his German Computer magazine (translated into English)
- If you can't find the part or device you are looking for in Mauritius we will source it for you in Europe, Australia/New Zealand, North America or Asia for the best price possible

More information is available on our web site.

Special projects ...

Based on our international experience, connections and close relations – for example to a German University for Applied Sciences – we are also able to undertake projects on a larger scale in the Government / Public Service sector of Mauritius to improve the infrastructure as far as organisation, workflow and implementation of ICT are concerned.
